# Making Lives Better

**BIO-MICROBICS**  
INCORPORATED

**Better Water for a Better World**

## **Water is the source**

Most of the world's water is unusable for daily needs. The oceans are huge, but don't help us much when it comes to providing fresh drinking water, or for washing, or to run our businesses and homes.

Usable water is a limited resource, and everyone is more aware than ever how important it is to regenerate what we have.

## **Letting Nature Do Its Work Better**

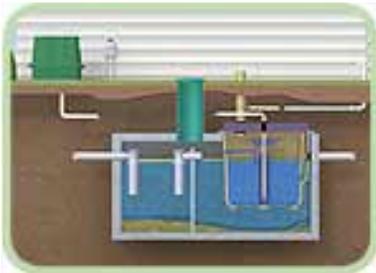

Bio-Microbics is the world's most innovative manufacturer of advanced onsite wastewater treatment systems. Our state-of-the-art units efficiently oxygenate wastewater, nurturing the growth of aerobic bacteria and other microorganisms, so they can do the work of biodegrading wastewater into reusable water.

## **Decentralized Systems and Modular Solutions**

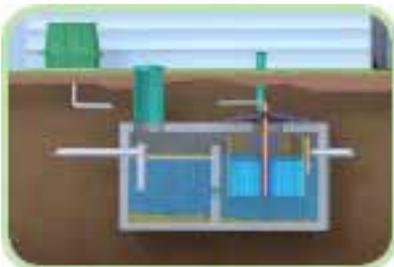

Major sewage systems are not only expensive, they also often require costly and constant repairs and updates. The beauty of our systems is their portability and modularity. Our water treatment plants are easily installed as complete units, facilitating easy replacement or add-ons as your needs grow.

# To Meet The Challenge

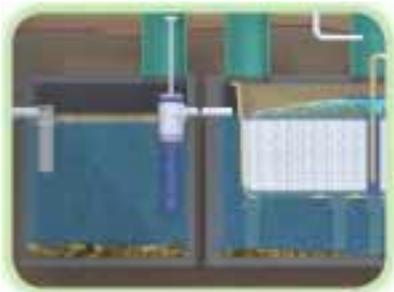

# With Cleaner Water

**MicroFAST® Wastewater Treatment Systems**

**RetroFAST® Septic System Enhancement**

**SaniTEE® Wastewater Screens**

## **FAST® Gets the Job Done Right**

Bio-Microbics' FAST® systems (for Fixed Activated Sludge Treatment) feature the latest in wastewater treatment technology combined with processes as old as nature itself.

After wastewater is channeled into the system, a remote above-ground blower starts the process by supplying the air needed for active aeration. Biological and chemical processes take over, and Bio-Microbic's patented stable fixed-film media provide a fertile home for nature's waste digesters to do their work efficiently.

## **A Solution-Based Approach**

In the past 10 years, Bio-Microbics has expanded its product offering to include a great variety of transfer and treatment devices for clustered residential wastewater infrastructure and high-strength commercial applications.

These include not only nitrogen reduction and wastewater aeration, but also many stormwater applications, grease removal, cooling tower water treatment, and renovation of failing septic systems.

Retro FAST® Septic System Enhancement works to salvage failing systems without costly replacement. SaniTEE® Wastewater Screens cut off pollutants before they make your systems work harder.

Visit us online at [www.microbics.com](http://www.microbics.com), to see the solutions that fit your wastewater needs.
